

# CONSTRUCTION

Over the last few years, the Oil & Gas Industry has seen a dramatic change in how projects are completed. E&P Companies need their Contractors to stay on time and on budget to make each project economically feasible. At Medallion, we pride ourselves on our Industry Leading Construction Practices. We have shown our customers that with great organization and a culture of hard work and efficiency, we can be a huge contributor to our customers' success.

We have completed a wide range of jobs, including everything from Small Well Tie-Ins, to very large Plant Construction. We strongly believe in raising the bar of our customers' expectations and make it our mission to challenge our crews to ensure our work is of the highest quality and completed in the most efficient way possible.

We are an Industry Leader in all phases of Construction, ranging from Off-site Modular Work, to On-site Construction, and through to Maintenance Planning during post completion.

## MODULAR/PRE-WIRE

- We have worked with many GC's to successfully complete Pre-Wire Packages. Our crews are experienced and well trained in modular work. Having the experience both as the Field Installer, as well as the Pre-Wire Contractor, we have developed an excellent system to ensure a seamless installation. We possess the knowledge that ensure a speedy, yet accurate On-site Install.
- Some of our past Pre-Wire Jobs include Compressors, Dehy's, Inlet Separators and many more.

## FIELD CONSTRUCTION

- We have been building well sites, satellites, and plants since 2009. We have worked with many customers throughout the peace country and have covered a wide geographical area from Edson, Alberta to Fort Nelson, BC. We have also completed hundreds of projects over this time span and have grown the company to become one of the largest E/I service providers in the area.

**CALL MEDALLION TODAY TO DISCUSS HOW WE CAN HELP YOU REACH YOUR GOALS.**

We will provide a tailored plan to ensure every benchmark is met on time and on budget.
